Subject: South Lyon WTP Site Tour HRC Job No. 20180233

Due to the Covid 19 Pandemic, The City of South Lyon and HRC determined that holding in person meetings and site walks should be avoided. To facilitate a site tour a series of videos and pictures have been uploaded to a file exchange server. You can access the server using the following link.

Bellow are descriptions of what to expect and some additional comments for each of the site tour videos.

1. Vid 1, shows the Well 7 line. the path from Well 7 to the plant was walked.
 - a. One note regarding what was said at timestamp 5:05. I stated that there will be a 90-degree bend to turn the line to face the plant. That is false. As shown on sheet C-04 there will be two 45-degree bends.
2. Vid 2, was corrupted. I left a spot for it as it is mentioned towards the end of Vid 1. This video showed the area directly across the fence that Vid 1 ended at. This area is very detailed on the plans and a replacement Vid 2 will be uploaded along with any responses that require video footage based on our 5-1-2020 Pre-Bid Meeting.
3. Vid 3, was taken in the main building's basement. Facing East. This shows the internal connections for the water lines that connect to the existing ground storage tank (Tank 1)
4. Vid 4, was taken behind the plant in the yard. The horizontal pressure filters can be seen along with Tank 1.
5. Vid 5, shows the roof of Tank 1
6. Vid 6, shows the rough location of the valve vault and the pipe paths to connect to Tank 2.
7. Vid 7, shows the parking lot next door where Tank 2 will be installed.
8. Pic 1, shows the electrical box that the new valves will tie into. It is the light grey box with the red label shown in the image. This is located in the operator control room.
